

Trail Reroute for Map 04, Edition 7.4 (2017MAY06)

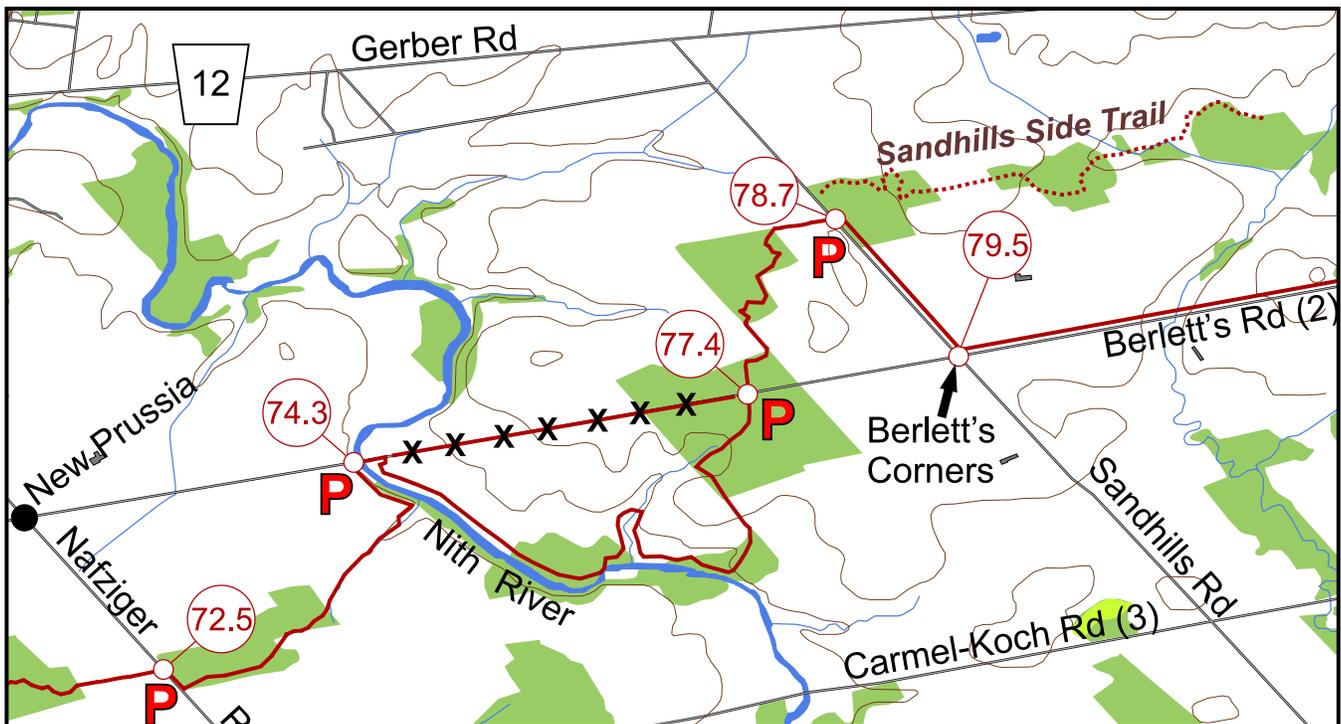

Thanks to generous land owners and the work of volunteer Avon Trail members, this is another reroute that removes the trail from Berlett's Road and adds trail to off-road, woodlots along the Nith River. The change in distance for this reroute is an increase of about 1.6 km. Note that the distances shown reflect new figures that will appear in Edition 7.5 being published soon.

km 73.8 - Berlett's Rd/Wilmot Twp 2 (43.455808, -80.739476)

The trail turns right (E) and crosses the bridge. About 100 m on, the trail turns right (S) leaving the road to go down a bank on a bike trail to a field. At the field, it turns right (W) to the river. The trail turns left (S) and proceeds alternatively along river edge and through woodlot. Eventually it reaches a small stream, turns left (E) and follows the stream, along a field edge to a culvert. Crossing this, the trail turns right (W) along the field. On the left is a bush-filled meteor crater. It continues through bush and field edge to the corner of the property. Here the trail turns left and follows the edge of the field till it reaches a bush on the right. It turns right (E), enters the bush, and proceeds about 150 m to a snowmobile trail. It crosses a stream on a corduroy bridge, turns right (E) and proceeds about 200 m to another snowmobile trail where it turns left (N). On the right is a small recent sugar shack. The trail then follows the snowmobile trail to Berlett's Road at km 77.4.

km 77.4 - Berlett's Rd/Wilmot Twp 2 (43.458493, -80.720464)

Straight across the road the trail re-enters the bush on the north side of Berlett's Road and winds through the bush in a north easterly direction, eventually turning left and emerging to follow a fence line north along the edge of a field.
